

## Activities:

ACTIVITY 1: In group, let's think about an example of a simple object and the types of data contained therein

ACTIVITY 2: As a class, we're going to discuss and evaluate group examples of simple object

ACTIVITY 3: As a class, let's discuss some helper classes that would help us to use the object

ACTIVITY 4: Write some code to assign a String variable then print that variable using

```
System.out.println();
```

| Name     | Value                                 |
|----------|---------------------------------------|
| myString | This is a simple string in a variable |

ACTIVITY 5: Write some code to concatenate two strings together using logical operators and the Strings below

```
System.out.println(myGreeting + " " + myName);
```

| Name       | Value          |
|------------|----------------|
| myGreeting | Hi, my name is |
| myName     | <YOUR NAME>    |

ACTIVITY 6: Demonstration of our Object that we created during class
